To whom who is the may concern

I want to talk about Just Right Trucking LLC a locally business own by Mr. Mitchell Matthew, this business has been servicing St. Croix for more than 20years. Mr. Matthew is now investing in a concrete block plant which will help the people of the Virgin Islands, especially home builder. The plant will be contributing to an economy that is already high in cost for building material and open jobs for the people of St. Croix. I support the project fully.

As a homeowner who lost my roof in 2017 and still doing repairs as of today 2022 I have seeing the high increase in prices for building material and a wait list which is ridiculous. Mr. Matthew did his research on the block plant being environmentally sound, I do not hesitate to recommend the ruling be in his favor.

Regards,

To whom it may concern,

Continental Construction and Engineering and Concrete VI have a well-established personal and professional relationship and have been involved as a supplier of concrete to the facility that Mitchel Matthews and Just Right Trucking LLC has constructed at Orange Grove where the block manufacturing facility will be established.

Just Right has worked for Continental Construction and Engineering as a subcontractor on a project that required dust control and land clearing on an environmentally sensitive project. Mr. Matthews discipline and that of his employees demonstrated that they had a clear understanding of the controls needed to execute that project.

Concrete VI, our sister company, provided Just Right Trucking with concrete for the facility's construction at Orange Grove. The facility is approximately 10,000 square feet, where indoor block manufacturing will take place. As a producer of concrete, Concrete VI understands the environmental concerns of manufacturing and due to the block plant's indoor location, dust and pollution concerns should be mitigated.

Construction in the Virgin Islands, as we continue to rebuild our infrastructure, will require accessible, affordable, and quality construction products. Manufacturing blocks will not only provide local access to them but create much needed employment for unskilled labor.

Best regards,
